

intuVision Unveils Version 4.0 of Panoptes and the Video Analytics SDK

Always pushing forward with new research and product capabilities, intuVision has released version 4.0 of our flagship product, Panoptes, and our Video Analytics SDK with more advanced capabilities.

Panoptes and the SDK provide the most robust automated intelligent video surveillance to allow human operators to spend minimal time watching surveillance video. Users outline events of interest, and get notified when selected conditions are met. The software has the capability to determine if an object is a person, a group of people, a vehicle, or any other object type a user can choose to detect raising it above mere object detection.

The 4.0 release elevates the detection capabilities and increases the level of support, featuring:

- Superior object tracking with dynamic backgrounds and lighting changes.
- Advanced *abandoned object* event spy, featuring ownership and radial distance parameters.
- Enhanced static object detection.
- Flexible event archiving and recording.
- Native Windows support for decoding H264, MPEG4 and motion JPEG video streams, supporting various AXIS, PELCO and other cameras.
