

INTUVISION – AT THE ISC WEST SHOW IN LAS VEGAS MARCH 23-25, 2010

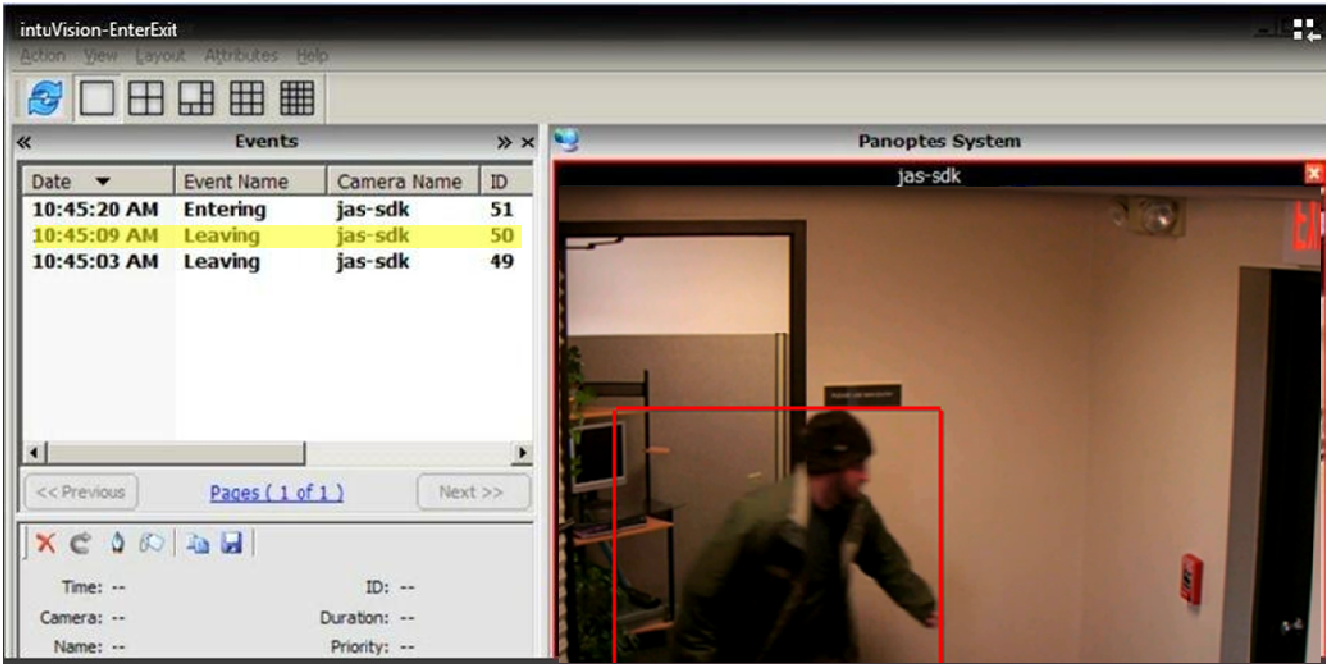

Woburn, MA – intuVision demonstrated at the ISC West show held in Las Vegas from March 23- March 25. The ISC West show is an International Security Conference where thousands of security professionals from around the world come together to discover new products from leading security intelligence and other related software manufacturers.

Intuvision’s video analytics software, Panoptes, is being used and demonstrated by Next Level Security Systems (NLSS) for their networked surveillance appliance. intuVision has developed Panoptes to monitor video streams in real-time and produce accurate alarms when preset event and conditions occur.

Panoptes has emerged as very useful for NLSS analytics as it can be easily integrated with their video intelligence software to track people and events. “The power of video analytics holds enormous potential in a market where there is a growing need for surveillance and perimeter monitoring integrated with access control. Our real-time and forensic video intelligence tools take security to a whole new level,” says intuVision CEO Sadiye Guler.

intuVision looks forward to launch new products and work together with manufacturers and integrators to develop end-to-end security systems. For information about our services and products, visit our website at www.intuvisiontech.com or call us at (781) 497-1015.

Panoptes detects and reports events in real-time as shown above detecting suspect exits through an office door.
