

## **intuVision VA Version 9.3 is here!**

---

We are pleased to introduce the latest intuVision VA release, 9.3!

This release marks our **renewed focus on enhanced user experience** – featuring new tools to allow for faster deployment and easier monitoring and management of the system.

Version 9.3 includes **automated day/night settings** now tied to sunrise/sunset times at the camera location. As many deployments use outdoors cameras with minimal artificial lighting –different configurations are needed for daytime and nighttime. The day/night switch-over times are now calculated automatically based on the location of your cameras. Additionally, event schedules can now be set based on sunrise and sunset, as different event rules may be needed during the day or the night.

Also new with intuVision VA 9.3 is our **Remote Monitoring Tool**. This tool remotely monitors your intuVision VA site from another computer, ensuring that your system is up and running; it will send notifications via email if a server is down or the intuVision services have been unintentionally stopped. intuVision VA Remote Monitoring tool will facilitate immediate action to ensure uninterrupted service.

### **The new features available in intuVision 9.3 include:**

- Day/Night Modes and event schedules based on the camera's latitude/longitude
- Remote Monitoring Tool to monitor an intuVision VA site is up and running
- Custom priority view in the Review App, including multiple priority views
- New camera priority levels for high priority cameras to auto-populate the priority views
- Updated event annotations storing
- Updated logging and log rotations; increased logging verbosity levels for better debugging
- Updated installers
- Option for Postgres install location for new installations
- Updated RTSP decoder
