intuVision, the leader in intuitive video analytics for security and surveillance applications announced a partnership with exacq Technologies, a leading developer of open architecture, Video Management System (VMS) software and servers. Through this partnership, the power of intuVision's award winning analytics is integrated with the exacqVision VMS.

With a simple to use, easily optimized video analytics system, intuVision puts the power of video analytics in the user's hands to automate surveillance monitoring. Easily configurable to work with a wide variety of IP and analog cameras, Panoptes detects, tracks, and classifies objects in surveillance video. With top-ranking event detection algorithms confirmed in independent evaluations, Panoptes provides assurance that users will be alerted to all threats in real-time. exacqVision video is ingested and processed through Panoptes, with video recording triggered by Panoptes event detections.

"We are pleased to offer our broad range of indoor and outdoor analytics integrated with the exacqVision VMS," said Dr. Sadiye Guler, the founding CEO of intuVision. She added, "Currently all Panoptes analytics are included with this integration and upcoming features such as crowd- density management will be available soon."

The scalable, easy to use exacqVision VMS solution is equally suited for complex enterprise systems and single camera video surveillance installations. The server software is available on factory-installed exacqVision hybrid and IP camera servers or can be installed on commercial off-the-shelf servers running Windows or Linux. The freely distributed exacqVision client software is available for Windows, Linux and Macintosh. Additionally, the free exacq Mobile app allows for powerful access to any exacqVision system using an iPhone, iPad, Android device, Kindle Fire or Blackberry Playbook.

"The sophisticated video analytics available in intuVision's Panoptes is a great match for the exacqVision VMS solution," notes Roger D. Shuman, senior marketing manager, Exacq Technologies. "It provides another layer of powerful video evidence to exacqVision users."

The integrated Panoptes exacqVision solution is currently available for deployment. For more information please contact info@intuvisiontech.com or info@exacq.com.

About intuVision – intuVision, Inc. (www.intuVisiontech.com) provides leading-edge intelligent video solutions for video analytics, delivering high performance at low cost. intuVision's line of video analytics include both real-time and forensic video content extraction, as well as a full featured SDK for 3rd party embedded applications. intuVision's real-time video event detection and video forensic investigation technologies have received top ranks in government and organizational evaluations including the first place in Video Event Detection Evaluation run by the National Institute of Standards.

About Exacq – Exacq Technologies (www.exacq.com) designs and manufactures the exacqVision cross-platform VMS software for exacqVision hybrid & IP camera servers or commercial off-the-shelf (COTS) servers. Exacq's complete range of factory installed servers feature the exacqVision Start, Professional or Enterprise VMS software. Additionally, the full-featured exacqVision Edge VMS installs directly on an IP camera. exacqVision Hybrid systems incorporate both analog (coax) and IP security cameras and encoders allowing for utilization of existing physical security infrastructures.
