

intuVision Unveils Version 5.0 of Panoptes

intuVision is pleased to announce the newest version of Panoptes. Panoptes 5.0 comes with great new features, as well as many improvements to previously available capabilities.

Taking your feedback and requirements into account we worked hard to bring you the features:

- Floor-plan interface to monitor cameras based on a floor-plan layout,
- Compound Events that allow users to create alarm rules based on multiple event combinations,
- 3rd party Input Triggers for providing external links into Panoptes,
- Updated and simplified Event Linking.

New **Floor-plan** feature allows monitoring cameras around a facility overlain on an imported layout image, to view camera interactions at a glance. This intuitive display option can help to deploy personnel quickly and effectively when responding to developing events as they unfold.

Compound Events make it possible to closely tailor events for scenario specific requirements. A compound event can be configured to send out alarms when selected component events occur in one or more cameras within a specified time frame. In a retail store, Panoptes can notify managers to send additional staff to the front counter when more than 10 people have approached the counter in 5 minutes. In a car dealership, an alarm can be triggered when a person is seen loitering in three different camera views.
